ASUDEL

ASUDEL

CHARACTERISTICS

ASUDEL process is especially designed to get colour shades with similar wash off effects as Denim.

ASUDEL are soluble dyes specifically modified to dye cationized fibres to achieve a very superficial dyeing which is easily washed down offering very nice contrast in seams and trimmings.

ASUDEL range of dyes has been created to replace the pigment dyeing with a lot of advantages:

- Possibility of dyeing extremely deep shades.
- Wide range of colours.
- Dyestuffs are easily combinable among them.
- Friendly process for shading in order to adjust final shades when necessary.
- If there is any issue on final shade, it is easily stripped off.
- Better rubbing fastness.
- Machinery remains very clean when compared with pigments.

ASUDEL dyes can be applied using different types of machines (garment dyeing, jigger, continuous dyeing range...) and on any kind of article (garments, fabric or yarns).
